

Wilkhahn

AT

AT's design and fluid lines immediately suggest it's a comfortable place for people to sit and benefit from a range of motion in all directions.

AT

187 range, design: Wilkhahn

Wilkhahn's free-2-move concept powered by Trimension® is a global benchmark in healthy three-dimensional sitting. The AT family with its integrative, coordinated design, variety of models and customisable features is the smart all-rounder among the free-2-move ranges. The self-centring suspension of the seat shell ensures your body maintains its centre of gravity – whatever the posture adopted or movement made. And the backrest bearer with its tilt capability comes with automatic weight adjustment. As a result, using AT's healthy range of motion is child's play. Just sit down, adjust the seating height and you're done! The chair and your body will do the rest by themselves ...

The patented Trimension® kinematics encourages natural and fluid motion in all directions. The three-dimensional stimulation of the joints, spine and muscles prevents backache and joint problems, boosts well-being and powers of concentration.

In digitalised offices, attractive design and encouraging more physical activity play a key role. An exceptional environment helps to attract and retain sought-after employees. The positive effects of Trimension® on health, well-being and mental agility have been borne out by three scientific case studies.

AT's modern aesthetic also sets a new standard in office chairs: all crossover points have been carefully modelled down to the last details, so that the frame's structure appears seamless. Picking white for the seat and backrest shell and frame components increases the choice of designs for different environments and conjures up especially fresh looks with an almost home-like appeal.

Combining the chair with table and conference chair ranges based on the same integrative design produces seamless design solutions – such as the Occo range here, designed by jehs+laub.

All office chairs from one range: AT with a high backrest, headrest, neck rest, leather upholstery and a classy frame is the perfect addition to an executive office.

If the office chair has one dedicated user only, the automatic weight adjustment comes with a presetting in 10 increments to adapt to personal preferences.

The wide range of fabrics and colours provides variety and consistency within an office concept.

Used at desks that can move up and down, the models with an elevated seating position (ESP from 420 – 600 mm) encourage people to alternate between sitting down and standing up.

In detail

Seat-/backrest shells, backrest bearer and frame

AT's key components are available in black or white, the backrest shell is also optionally covered with fabric at the rear. The armrest pad and all controls are always grey. The different upholstery elements make three backrest heights possible, medium height, advanced height and advanced height with headrest and neck rest. The upshot is a wide range of models for any areas requiring office chairs, as well as covers from the Wilkhahn fabric and leather collection, so there's virtually no limit to the designs possible.

Height adjustment/ seat-depth extension

Icons on the controls illustrate what they do: the lever on the right precision adjusts the seating height and the knob conveniently alters the optional seat depth extension while the user's sitting down.

Locking/optional presetting the automatic weight adjustment

The push button on the left locks the chair in a neutral 0 position and the knob allows presetting in ten increments to adapt to personal levels of comfort.

The height of the **armrests** is adjustable by 100 mm at the touch of a button. The depth of the armrest pads on 3D armrests can also be extended by 50 mm and the width by 25 mm, 4D armrests can also rotate inwards and outwards by 25°.

Integrated lumbar support and optional 3D forward tilt

All AT models feature integrated lumbar support and their height is also very easy to adjust by 60 mm via handles on the backrest at the sides. The optional activation of the innovative 5° forward seat tilt raises the backrest and therefore the lumbar support synchronously.

Trimension®

The self-centring suspension of the seat shell on the backrest bearer and automatic weight adjustment allows bodies to maintain their centre of gravity – whatever the posture or movement – without altering the chair to suit different users. The coordinated design of each component creates a sculptural apparently seamless form. The chair symbolises the fluid, automatic and intuitive movements the user makes.

Frame surfaces

All plastic components are in black or white (the synchro-adjustment mechanism, backrest bearer, seat and backrest shell and armrests)

Armrest pads, controls

Grey

Upholstery material for seat and backrest shell

37 | 47 | 54 | 60 | 62 | 63 | 66 | 67 | 68 | 69 | 91 | 92

You can find all upholstery materials and further colours in our media center.
The backrest shell can also be covered.

Star base

Aluminium coated in black or white, polished or high-lustre polished or black through-dyed, glass-fibre-reinforced polyamide

Basic functions

Trimension® with automatic weight adjustment and height-adjustable lumbar support

Optional extra features

- If desired, automatic weight adjustment with presetting in 10 increments
- Contact suppression feature
- Patented 3D forward tilt with the seat and back raised at the same time can also be activated
- Seat-depth extension
- Height-adjustable armrests (1D), with depth and width adjustment (3D), with additional swivel capability (4D)
- Armrest pads with a soft-touch surface.
- Coat hanger

In addition to office chair models with normal height adjustment and an elevated sitting position, AT also has height-adjustable counter stools with adaptable foot rings. These models aren't just used at counters, but also at high tables in modern project rooms so that people are at the same level when they're sitting and standing.
