

Landing.

208 range

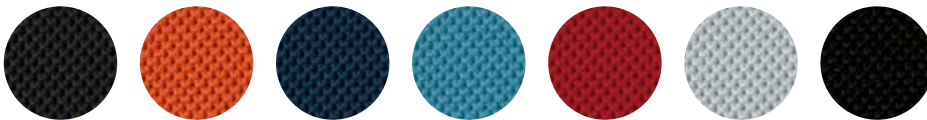

The sound-absorbent Landing wall relief manages to create a welcoming atmosphere for spontaneous “stopovers”, even where space is lacking in places such as aisles, cross-over spaces and stairwells. A flat, upholstered, textile-covered element, 60 x 60 cm in size, and an equally large three-dimensional relief component can be arranged and combined at will.

Depending on its configuration, the relief can be used for perching or leaning on, as shelving or a screen for more privacy. Landing's available in seven colours, improves acoustics, creates niches, takes the weight off feet while standing and is a space for drinks and smartphones.
